

# PingThemAll Logs

---

Document revision 00

## PingThemAll (PTA) Logs:

Inside the PingThemAll folder, you will see another folder called **ptalogs**. As PTA runs, it will generate two files in this folder...

**ptaalltime.log** Long-term log file.  
**ptalastrun.log** Just PTA data from the last ping cycle.

Among the data collected in the log files, you will find:

- Every time a cycle begins or ends.
- License information.
- Config.ini values read and/or set.
- Pinged device failures or clearing of previous failures.
- Results updating.
- New day detection.
- Summary preparation and e-mailing.
- Cleaning up and consolidation of logs.
- Number of devices monitored.

At the end of every PTA cycle, the data from that cycle is added to the ptalongterm.log file. Once that operation is complete, the ptalastcycle.log file is erased and recreated.
